

MAC3 HC

Smart Swimming Pool Pump Inverter

The MAC3 inverter enables significant energy savings for swimming pool pumps by running the pump at reduced speeds when desired.

Operating parameters are customisable through the onboard interface with LCD display. Up to 4 pre-programmed speeds can be used.

The advanced versions of the Controller include a Wi-Fi feature which allows the user to configure the system from any internet location. A web-based application enables configuration of a weekly operating schedule.

- Daily and weekly programming from smartphone web app
- Wide range, three phase up to 15HP pumps
- Supervision and remote management of the pumping system: schedule working time, verify savings and manage.
- Electric and hydraulic protections of the pump: over current, abnormal voltage, dry running, low pressure.
- 5 pin input: allows the connection of an additional external controller
